

SUPPLEMENTARY MATERIAL

Supplementary Figure S1. Entacapone use produces no changes in alpha-diversity. Chao1

and Shannon alpha diversity metrics are shown for each PD patient sample. PD_L patients are indicated in red, while PD_LE patients are indicated in blue.

Supplementary Figure S2. PD_L and PD_LE microbiomes share many core taxa, but have distinct microbiomes. Core microbiome analysis of PD_L and PD_LE subjects that do or do not take laxatives. A detection threshold of 0.001 and an abundance threshold of 0.25 was selected.
