

Bibliography of British Columbia Archaeology

In the first *BC Studies* "Special Issue" on archaeology in 1970 I compiled an initial twenty-five page "Bibliography of Archaeology in British Columbia" which listed most publications about British Columbian prehistory up to that time. That bibliography proved a useful tool for British Columbia archaeologists, and was partially updated in the 1980-81 "Special Issue." That included another twenty pages of references, although there was no intent to make that listing fully comprehensive.

In tune with the accelerating pace of change in almost all aspects of modern life, since 1981-82 there has been a veritable explosion in the quantity of material written about British Columbia prehistory. Keeping abreast of that information has been distinctly challenging for even professional archaeologists, and much of it has fallen beyond the reach of other British Columbians, including the politicians and bureaucrats who exert some control over how archaeology is carried out in this province. At the very least, there should be a basic bibliographic file of professional articles and papers so that interested observers can easily determine what has been written about their favourite area or topic.

Thus, I hope the following bibliography will provide an initial view of the large body of written information about British Columbia's prehistory, and prove a useful tool for both archaeologists and non-archaeologists. I have tried to compile all significant monographs, books, and journal articles of any date not listed in the two previous bibliographies, although naturally most references post-date 1980. I have also included many graduate theses bearing on British Columbian prehistory from the three universities (British Columbia, Simon Fraser, and Victoria) as well as many of the longer and more significant unpublished "permit-reports," or "Cultural Resource Management reports," submitted to government or industry. There are also a large number of smaller unpublished reports prepared for those agencies which were not included in this bibliography, and readers are advised to turn to the valuable 343-page "Archaeological Field Research in British Columbia: An Annotated Bibliography" pro-

duced by the Archaeology Branch, Victoria, in 1989, for a listing of that material.

I hope that in combination with the two previous *BC Studies* bibliographies, this should provide a fairly complete tabulation of written material bearing on British Columbian prehistory. Of course, it would be foolish to claim that it is truly comprehensive, and there are undoubtedly a number of unpublished reports and student theses, in particular, which were missed. To any individuals who invested many hours of effort in producing reports which were inadvertently excluded from this listing, I offer my deepest apologies. That absence is in no way intended to denigrate their work, but is simply the predictable result of a data file which has expanded beyond the integrative capacity of any single person. Nevertheless, I hope that this bibliography overall, in combination with the two earlier editions, will provide a general listing of archaeological writing about the pre-contact cultures of this province, and a useful reference-source for all people beginning to explore that literature.
